

Universal plaster stop used at door and window openings, wall terminations and intersections.

- Used with stucco applications starting at 3/8" thick.
- Available in galvanized and zinc for corrosion resistance.
- Eliminates the need for expensive wood trims.

#66 Expanded Flange Casing Bead

Dietrich #66 expanded flange casing beads are used as a plaster stop, an exposed trim around wall openings and at junctions or intersections of plaster and other wall or ceiling finishes. Extra-

long expanded flange for tie-on applications. Short 90° return flange at plaster surface ensures a neat finish.

Commonly applied under metal lath. Also used with gypsum lath, plaster board, plaster bases or masonry construction. #66 casing bead protects edges from damage, and covers shrinkage cracks that occur at stucco termination within the lip of the bead.

#66 Expanded Flange Casing Bead—Galvanized (XXCB), Zinc (XXZB)
