

Compound-reducing steel reinforcement for lasting drywall corner protection.

- Nonknurled, uses less joint compound.
- Electrogalvanized coating offers effective compound adhesion.
- Nailed or clinched to framing and drywall.

Clinch-On Products, Co.
Electrogalvanized
Corner Bead

Smooth bead provided by Clinch-On Products, Co. is a nonknurled electrogalvanized corner bead designed to use less joint compound. Roll-formed under the same quality standards as all of their products, this corner bead provides lasting corner protection to exposed drywall edges and smooth, straight corners. Nailing perforations and electrogalvanized coating offer effective joint compound adhesion. This product is commonly used in selected southeastern areas.
